AI usage log

Deliverable D6 · Assignment: Agentic AI Loan Approval Demo · Tools: Cursor (Composer / agent) · ~1 page

1. How AI was used

Workstream	What AI did	What I directed / corrected
Briefing	Parsed the PDF assignment into deliverables, scoring, and submission checklist.	Confirmed product = home loan; root folder = `Agentic AI Loan Approval Demo`; host on existing GCP account with near-zero cost.
Domain research (D5)	Drafted stages, roles, documents, LTV/FOIR/CERSAI framing and source list for Indian retail home loans.	Kept claims conservative; marked demo policy as illustrative; insisted on named public sources + practitioner validation note.
Demo UI (D1–D4)	Built single-page Sanctum app: live agent journey, approach story (2 acts), architecture layers, About/FAQ, Contact, Docs hub.	Chose navy/gold banking look; three synthetic cases (clean / charged property / income mismatch); human-in-the-loop cannot be skipped.
Explainability	Wired policy table with clause citations and recommendation reasons per case.	Ensured agent never auto-sanctions; officer buttons record agree/override narrative.
Hosting	Dockerfile + nginx static image; Cloud Run deploy (scale-to-zero, 128Mi) on project `veritas-claims-512706`.	Required bare-minimum cost; reuse existing GCP login; India-friendly region where available.
This log (D6)	Structured AI usage into a one-page reflection.	Reviewed for accuracy and submission readiness.

2. Time saved (honest estimate)

- Assignment decomposition & checklist: ~1–2 hours → ~15 minutes.
- First working multi-page demo + styling + three cases: ~1 day → ~few hours with AI-assisted coding.

- Research note first draft: ~half day → ~1 hour, then human edit for accuracy tone.
- Cloud Run packaging & deploy commands: ~2–3 hours → ~30–45 minutes with AI guidance.

Net: AI compressed scaffolding and first drafts; human judgment stayed on banking accuracy, HITL design, cost, and what to say in the walkthrough.

3. Transparency statement

Code, copy, and documents were produced with substantial AI assistance in Cursor. I own the product choice (home loan), the decision to keep the agent scripted for demo clarity, the GCP project/account used for hosting, and the final review of domain claims before submission.
